

Deployment Life Cycle

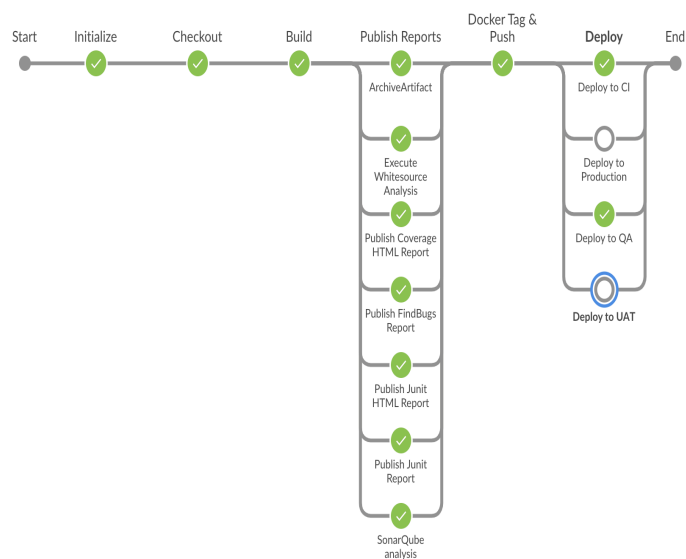

1. Deploy to continuous IT env along with Integration & smoke test.

Branch: -	🕒 4s	No changes
Commit: -	🕒 6 minutes ago	Started by user ritesh

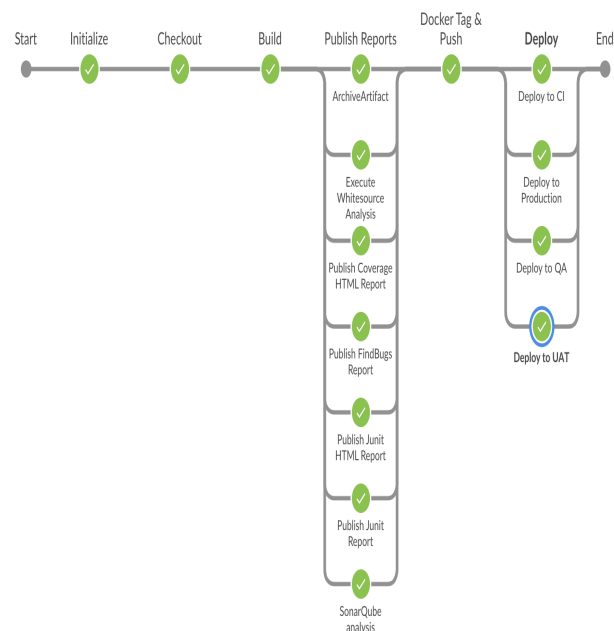

2. Deploy to both QA & IT env at same time. Having Functional Test on QA env.

Branch: -	🕒 3s	No changes
Commit: -	🕒 2 minutes ago	Started by user ritesh

3. Deploy to IT, UAT (Pre-prod) env. To have regression testing.
4. Finally deploy to production env. Along with smoke test and alerting and monitoring enabled.

Branch: -	🕒 3s	No changes
Commit: -	🕒 2 minutes ago	Started by user ritesh

The pipeline is created in a way that any env can deployed transparently without effecting another env till production.
